

## Shear Stress Notes

### Units and symbols:

$\sigma$  Normal stress (Pa)

T Shear strength (Pa)

$\tau$  Shear stress (Pa)

$\rho$  Density ( $\text{kg/m}^3$ )

g Acceleration of gravity ( $9.81 \text{ m/s}^2$ )

m Mass (kg)

H Depth/height (m)

N Newton = Force

### **FORCE**

$$force = mass * gravity$$

Units of force:  $\text{N} = \text{kgm/s}^2$

How would we convert forces into pressures?

### **PRESSURE**

$$pressure = \frac{force}{area} = \frac{mass * gravity}{area}$$

Units of Pressure:  $\text{Pa} = \text{N/m}^2 = \text{kg/ms}^2$

$$\text{kPa} = \text{Pa}/1000$$

# Shear Stress Notes

## Free-body Diagram on a Flat Surface

Normal stress (flat plane):

$$\sigma = \rho \cdot g \cdot H$$

## Free-body Diagram with Slope

Shear stress:

$$\tau = \rho \cdot g \cdot H \cdot \sin(\psi)$$
